

Technical White Paper
v0.7

October 28, 2022

What is MetaLyncs?

MetaLyncs is a token that provides access to stable high-yield passive flows, backed by a basket of utilities and a strong technical team. This utility-backed token offers features that protect holders from high-volume market manipulation that may disrupt other tokens. Through industry partnerships, MetaLyncs sits at the intersection of the virtual, augmented, and real world, enabling the exchange of information across metaverses.

MetaLyncs will offer high-yield, sustainable long-term rewards via road mapped staking opportunities which are convertible. MetaLyncs stakers benefit from a valuable basket of advanced high-yield utilities such as:

- **Swapping**
- **Lending Pools**
- **Arbitrage**
- **NFTs**
- **Property**
- **Virtual and Augmented Reality Platforms**
- **Real and Virtual Events**

MetaLyncs is community built and backed by a basket of advanced high-yield utilities that were previously out of reach for many, all the while protecting them from manipulation and crash risks through our anti-dumping mechanism.

Beyond these benefits, the MetaLyncs community will also give holders exclusive access to a growing list of real and virtual world experiences and benefits, offered by our rapidly expanding network of partners.

Unlike tokens that rely only on holder confidence, MetaLyncs is designed with features and backed by utilities to create long-term stability and offer sustainable staking and other benefits to holders. Most tokens that offer super-high APYs typically rely on an ever expanding pool of new investors to drive the price up to sustain those returns. This is ultimately unsustainable and leaves investors never knowing when the token will crash.

Value Backed Token & Future Staking

Because of the utility backing it, MetaLyncs holders will be able to take advantage of high-yield, sustainable MetaLyncs Staking Programs that will offer a proportional rate of return plus many other benefits in the near future. Holders will benefit from proportional rewards through 15 day, 30 day, 90 day, 6 month, and 1 year staking contracts.

MetaLyncs has forged partnerships with leaders across DeFi, media, gaming, service, technology, real estate, and other industries. MetaLyncs' growing portfolio of valuable, high-yield assets includes global rental and vacation properties, technology, intellectual property, and digital assets.

Virtual and Real World Benefits

Beyond a high-yield financial token, MetaLyncs is linking metaverses with the real world. The MetaLyncs token frees holders with the ability to move and transact across real, augmented, and virtual reality dimensions.

MetaLyncs will give holders exclusive membership benefits, including access to virtual and real world experiences that are available to no one else. MetaLyncs holders will benefit from access to vacations at in-network resort properties and homes around the world, virtual time in studio with top musicians, concerts and other entertainment events and venues, and services offered by MetaLyncs Partners.

The MetaLyncs token, technology, partner, and asset ecosystem is rapidly being positioned to be at the very center of the next technological revolution.

Anti-Whale & Anti-Manipulation

MetaLyncs offers an opportunity to participate in long-term high-yield passive flows, backed by advanced utilities. MetaLyncs was not designed to offer a quick get-in and get-out pump-and-dump return for short-term investors.

To maintain price stability, MetaLyncs prevents holders from causing the equivalent of a bank run by limiting daily withdrawals to about 1% per day. **From launch, withdrawals are limited to 1% of the current wallet balance (minus the total of all withdrawals from that wallet within the last 24 hours).** Withdrawal limits apply to the total of any sell backs, swaps to other tokens, and wallet-to-wallet transfers.

As token value increases due to high-yield returns generated by backing utilities, the percentage limits will be managed to allow increased daily withdrawals.

This prevents token dumping because investors are unable to sell all of their tokens overnight. Instead, they may only sell small quantities over time, keeping the price and chart stable and healthy as staking and backing utilities are introduced.

An Exclusive Token with Long-Term Benefits

The MetaLyncs token was designed to give holders access to exclusive programs and benefits that were previously limited to a select few. High-yield products, services, assets, and benefits that were typically unavailable to all but high-net-worth individuals will be made available to MetaLyncs token holders.

MetaLyncs Treasury and Insurance Fund

The MetaLyncs Treasury and Insurance Fund plays an important part in the MetaLyncs protocol. A portion of fees from buys and sells goes into the Treasury and the Insurance Fund, which performs three important functions:

- The Insurance Fund provides funding for the marketing of MetaLyncs.
- The Treasury acts as additional support for the Insurance Fund, which protects MetaLyncs in the event of an extreme price drop. It helps create a supporting floor for the token. The use of the Treasury is completely at the discretion of the team. Investors have zero vote on how the Treasury is used.
- The Treasury funds research and development, asset purchases, partner development, operations, and other internal expenses.

Tokenomics

MetaLyncs is focused on providing holders with passive income and price stability. Therefore it is in everyone's interest to have a fee structure that rewards long-term holding and discourages day-trading and pump & dumps.

MetaLyncs Fees:

	Buy Tax	Sell Tax
Insurance Fund	4%	5%
Treasury	4%	5%
Liquidity Pool	2%	2%
Expense Fund (legal)	1%	1%
Charity	1%	1%
TOTAL	12% Slippage = 14% *	14% Slippage = 17% *

** Listed slippage is approximate. In order to overcome the tax, the slippage must be set to a rate that is high enough to pay the tax and cover the price impact. In other words, for a tax of 12%, the slippage must be set to 12.5% or higher to ensure the trade executes (tax + price impact).*

Donations to Charity

MetaLyncs was created to support humanitarian goals. A fee of up to 1%, from all buys and sells, is donated to charity.

No Team Tokens

In keeping with the humanitarian purposes of MetaLyncs, there are no distributed team tokens to prevent early exits and resulting price instability. Team expenses will only be funded using taxes to help ensure the long-term mission and sustainability of MetaLyncs. All tokens held by team members were purchased individually.

Disclaimer

All cryptocurrencies carry risks. These are not guaranteed returns. Do your own research before acquiring MetaLyncs tokens.
